DIGITAL

HOUSING SURVEY PLATFORM

From inspection to evidence in real time.

Sandford Site Scan creates a GPS- and time-stamped, tamper-evident inspection record - with cryptographic proof that can be independently verified.

1,600+
Registered providers now subject to Awaab's Law

21
HHSRS hazard categories supported through a structured guided workflow

BS 10008
Aligned - tamper-evident chain of custody

£0
Additional hardware - standard mobile device

hello@sandford.digital · sandford.digital

The audit trail problem in housing.

Paper forms
Dates, locations and observations are typically entered manually, making provenance and contemporaneous context harder to demonstrate later.

WhatsApp photos
Images shared through messaging can become separated from their original capture context, room mapping and inspection record.

Spreadsheets
Useful for administration, but editable after the event and usually separate from the original capture evidence and provenance.

Delayed reporting
When the formal record is completed later, the link between observation, location, time and the final record is harder to evidence.

AWAAB'S LAW - SOCIAL HOUSING (REGULATION) ACT 2023

The regulatory landscape has changed

Following the death of Awaab Ishak from prolonged mould exposure in a social housing property, Parliament introduced mandatory response timeframes. From October 2025, registered providers must investigate hazards within legally defined windows - and demonstrate compliance with a timestamped, documented evidence trail.

24 HOURS
Emergency hazards - make-safe works must begin within 24 hours of identification

10 DAYS
Significant hazards - investigation must begin within 10 working days

ROUTINE
Lower-risk defects - documented and scheduled for planned maintenance

Evidence requirement	Current approach	Sandford Site Scan
Capture time	Manually entered or system-dependent	**Time context recorded at point of capture**
Location context	Often separate from the evidence	**GPS context recorded with the capture**
HHSRS workflow	Relies on separate forms or surveyor process	**Guided workflow covering all 21 HHSRS categories**
Awaab's Law workflow	Triage and actions managed across separate systems	**Structured findings support provider triage and statutory processes**
Evidence integrity	Editable files can make later changes hard to evidence	**Tamper-evident chained record with cryptographic proof**
Verification	Evidence normally verified within the originating system	**Proof can be independently checked without publishing private evidence**
Offline working	Some workflows depend on connectivity	**Surveys can be completed offline and synchronised later**

"When insurers, regulators or legal teams ask for evidence of asset condition, provenance matters. Photos, forms and spreadsheets can make that chain difficult to demonstrate."

Sandford Site Scan for housing associations.

1. **Select property** Address & UPRN lookup
2. **Capture evidence** Camera + GPS/time
3. **HHSRS workflow** 21 guided categories
4. **Awaab's workflow** Findings support triage
5. **PDF report** Shared before leaving site

Capture context & tamper-evident chain

Each capture records GPS and time context and is linked into a tamper-evident evidence chain. Cryptographic proof is anchored periodically on Arbitrum One for independent verification.

Guided HHSRS workflow

A structured professional workflow supports assessment across all 21 HHSRS hazard categories. The surveyor remains responsible for the inspection judgement and finding.

Awaab's Law workflow

Findings can be recorded and surfaced for provider triage against Awaab's Law processes. Sandford Site Scan does not make the legal determination or assign statutory deadlines automatically.

Offline-first

Surveys complete fully offline and sync when connectivity returns. Works in basement flats and properties with no signal. No specialist hardware.

HHSRS functional checklist

21 hazard categories per room - boiler safety, carbon monoxide, structural checks - with surveyor notes attached to each finding.

Instant PDF report

A structured survey report generated and shared from the device before the surveyor leaves the property. No post-survey data entry required.

WHAT THE SYSTEM DOES • IN PLAIN ENGLISH

What the surveyor sees
- Captures room-by-room photographic evidence with GPS and time context
- Uses guided HHSRS and functional check workflows
- Records findings relevant to Awaab's Law triage without automating the legal judgement

What the manager sees
- Evidence records by property and survey
- Findings and actions available for operational follow-up • Tamper-evident evidence plus independently verifiable cryptographic proof

1. Get in touch

Contact us at hello@sandford.digital. We'll arrange a 30-minute live demo covering a full property survey from door to PDF - no setup required on your side.

2. Pilot programme

Access is currently by invitation. We provision the pilot environment and give your team a short walkthrough. No new specialist hardware or large IT project is required.

3. Start surveying

Your team completes the first property survey on day one. Evidence records are created in real time. PDF reports are generated and shared before leaving the building.

The cost of a broken audit trail.

REGULATORY

RSH

Where a provider cannot demonstrate a documented inspection and response process, the Regulator of Social Housing may require evidence of systemic improvement and has powers to appoint a manager where governance is found inadequate.

LEGAL

Inquest

Where a hazard is linked to serious harm, the absence of a contemporaneous inspection record will be examined at inquest or in civil proceedings. Sandford Site Scan ensures that what was seen, where, and when is documented at the moment of observation.

INSURANCE

Claims

Where condition evidence is relevant to a claim, a contemporaneous record with clear provenance can help an organisation demonstrate what was observed, where and when. Requirements vary by insurer and claim.

Sandford Site Scan creates a contemporaneous inspection record with tamper-evident provenance and independently verifiable cryptographic proof.

Does it require a wi-fi or mobile signal on site?
No. Sandford Site Scan is fully offline-first. Surveys are completed without any connectivity and synced to the cloud automatically when a signal is available.

What devices does it run on?
Any modern Android or Apple mobile device - no specialist hardware required. A pilot can begin with devices your surveyors already carry.

How long does a full property survey take?
A typical two-bedroom flat takes 20-35 minutes, including visual captures for all rooms and the HHSRS functional checklist. The PDF report is ready before the surveyor leaves the building.

How is the data stored and who can access it?
Inspection evidence remains private within the service. Only cryptographic proof is anchored publicly, allowing integrity to be checked without publishing the underlying photos or survey record.

Maz Hayes, Founder, Sandford Digital Ltd

Twenty years in regulated industries
Senior digital leadership roles at IBM, WPP, Adobe, RBS and Bank of Ireland UK. Finance officer and management committee member of a registered housing association. Sandford Digital Ltd is registered in England and Wales (reg. 17400537).

Ready to see it in action?

Pilot access is by invitation. A 30-minute live demo covers a full property survey from door to PDF report, with no prior setup required on your side.
